

COMPLIMENTARY ASSESSMENT

Microsoft 365 Health Check

www.oneadvanced.com

 **Advanced**
IT Powered Possibility

Service Overview

We are pleased to be offering a complimentary health check which will review your existing Microsoft 365 (M365) environment and provide recommendations in relation to **cost, security, and performance**.

Microsoft 365 comes with a wide range of capabilities, however these are often not used to their full potential. This may be due to a lack of awareness of what's included, a lack of understanding of how to use the features, or you may be using third-party products instead of taking advantage of features included in your Microsoft 365 licensing.

This will be delivered in a virtual workshop format, broken down into three key steps:

Discovery	Strategy	Execution
Analysis of existing environment	Understand business objectives and priorities	Joint plan of action for implementing recommendations

A PDF presentation will be shared with you after the workshop outlining the outcomes discussed and we will work with you to identify where support may be required to implement any approved recommendations.

The workshop will cover 3 main areas:

Cost Optimisation

Advanced will provide a list of recommendations to ensure you are maximising your investment in M365. Areas we will assess may include:

- Third-party asset review
- Matching up personas & licensing

Our recommendations should help identify costs savings, provide you with a clearer view of the budget and give you greater awareness of M365 capabilities.

Security

Advanced will provide a list of recommendations to ensure your environment has the relevant protection in place from security threats, as well as meeting standards from a compliance protocol. Areas we will assess may include:

- Identity and access review
- Security management
- Threat protection

Our recommendations should enable you to enhance your security posture, align to Microsoft best practice, and reduce the risk of attack.

Performance

Advanced will provide a list of recommendations to ensure you are realising the true advantages of adopting cloud technologies and improving productivity. Areas we will assess may include:

- User adoption
- Endpoint analytics

Our recommendations should help improve productivity, cloud adoption, and ensure your environment is in-line with Microsoft Best Practice.
